

WFRBoost Mobile

Mobile WiFi

Having spent thousands of hours traveling in RVs and on Busses, the WiFiRanger team understands that having good WiFi coverage and access can make all the difference. This has led to the development of the WFRBoost Mobile accessory kit.

WFRBoost Mobile combines all the features you need to have a secure, reliable and robust WiFi network installed in a moving vehicle.

Installing the WFRBoost Mobile with a WiFiRanger Pro (Not Included) gives a rugged, reliable, and powerful Mobile WiFi solution.

Features

Weather Sealed

When properly installed, the WFRBoost Mobile kit provides a weather proof seal, making it ideal for any WiFi application on the move.

Multi-Field WiFi Antenna

The included 3 dBi rated antenna provides increased flexibility when vehicles are parked on inclines, or are directly below Access Points.

USB Charging Points

The Mounting Plate includes a pair of USB Charging ports so that wherever you install the unit, you can also use it to charge things like iPods, Mobile Phones, and other USB electronics.

Optional Standoff Mount

For increased installation height 21 cm standoff mount is sold separately.

Solid Mounting

All of the components of the WFRBoost Mobile are designed to survive in the Mobile Environment. The Mounting Plate is a penetrating mount for the WiFiRanger Pro (Not Included) that keeps it from being damaged by vibration. And the outdoor Radio and Antenna are rated for Mobile use.

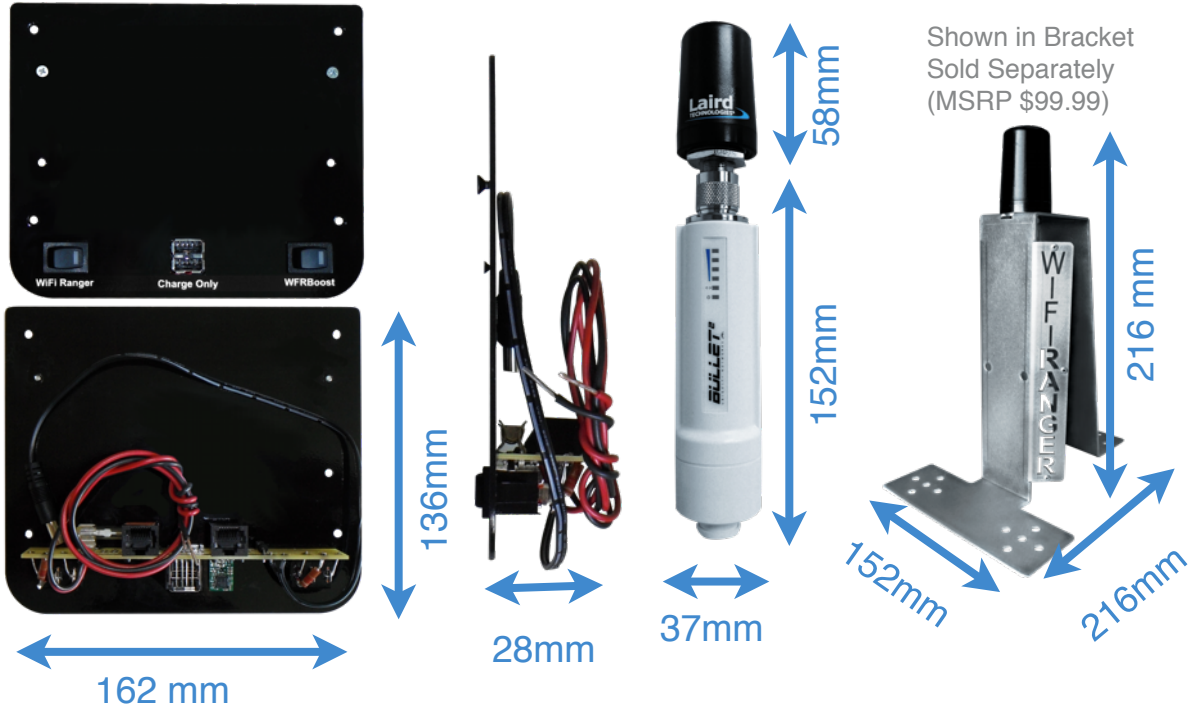

Increased WiFi Reception

The WFRBoost Mobile includes a rugged antenna designed to be mounted outside the vehicle. The antenna is a Multi-Field design, which can receive WiFi signal from dozens of different angles, meaning you get better reception, no matter where the antenna is in relation to the access point.

Vehicle Power Ready

The Mounting Plate is designed to tap directly into the 12 Volt DC power systems commonly found on vehicles. The mounting plate converts the voltages to power a WiFiRanger Pro, as well as Power over Ethernet to power the external WiFi Radio.

Technical Specifications

Package Contents

Bullet2	Outdoor Rated 802.11b/g WiFi Radio. PoE Powered
Mounting Plate	Integrated electronics for 12v Power, PoE, Power Switches, and USB
Mounting Equipment	Installation guide, surface cutout guide, power cord, screws.
CAT5 Patch Cable 4"	4" of indoor rated Category 5 Ethernet cable to connect the WiFi Ranger Pro to the mounting plate data port to provide data to the PoE port.
CAT5 Patch Cable 30'	30' of outdoor rated Category 5 Ethernet cable. Used to connect to the Bullet2 for Power and Data.
MSRP	\$299.99

Optional Accessories

Stand-Off Bracket	The bracket provides a higher mounting point for the outdoor components of the WFRBoost Mobile. MSRP \$99.99
